

THE GALILEO LUNA. Intelligence at Hand.

All the features of our revolutionary Galileo computers, including hoseless gas integration, personalization, unique PDIS feature and 3 extra large dot matrix display modes.

Enrich your dive experience with the Heart Rate monitor and advanced Predictive Multi-Gas options via IR later.

HOSELESS GAS INTEGRATION

Galileo LUNA uses a radio transmitter mounted on the regulator first stage to transmit tank pressure – via an interference-free coded radio link – to the wrist unit. The tank pressure data is used to provide a real remaining bottom time calculation and can be used to assess the effect of physical effort on tissue offgassing.

NAVIGATIONAL SYSTEM WITH DIGITAL COMPASS

Galileo includes a full-tilt digital compass plus bearing setting and memory feature for fool proof navigation. Its sophisticated technology allows the compass to operate correctly regardless of the position of the diver's wrist and graphically marks the direction set, guiding you back on course in case you stray.

PDIS (PROFILE DEPENDENT INTERMEDIATE STOPS)

The PDIS option calculates an intermediate stop based on how much nitrogen uptake your body has endured, taking into account your current dive, previous dives and breathing mixes. This proposed stop allows you to reduce on gassing and slowly release nitrogen while you continue cruising along and enjoy your dive. PDIS is a unique scientific application from UWATEC, for safer, more optimized diving in both the recreational and technical arena.

CLEAR TEXT, MULTI-LANGUAGE ALARMS

All alerts and alarms are displayed in clear text on the large dot matrix display. Text alerts are shown in one of the 6 pre-loaded languages (English, German, French, Italian, Spanish and Dutch, more will be available through downloads) and supplemented by visual and audible warnings.

USER CHANGEABLE BATTERY & DEPTH RATING

Thanks to its oil-filled electronics compartment, Galileo is rated to a maximum depth of 330 meters (per EN13319 standards), while the battery is contained in an air-filled housing allowing the diver to easily change it if necessary.

UPGRADEABLE FEATURES

LUNA can be upgraded with 2 additional features— Predictive Multi Gas Algorithm and Exclusive Heart Rate Monitor, available as optional purchases at your Authorized SCUBAPRO UWATEC dealer.

MSRP \$1350 / \$918 wrist only
